

# Notes for Textual Analysis Program

## Initial Steps

1. Create a CSV file called `Data.csv`. The CSV file should only contain the case-sensitive headers `Record ID`, `Institution Name` and `Link to File`. The details for each record were obtained from the various FED, OCC, and FDIC files. For reference, the `Data.csv` file must look like [this](#).
2. If the PDF files to each record are available locally, the PDF file must be renamed to be the appropriate `Record ID` and the `Link to File` field can be left blank.

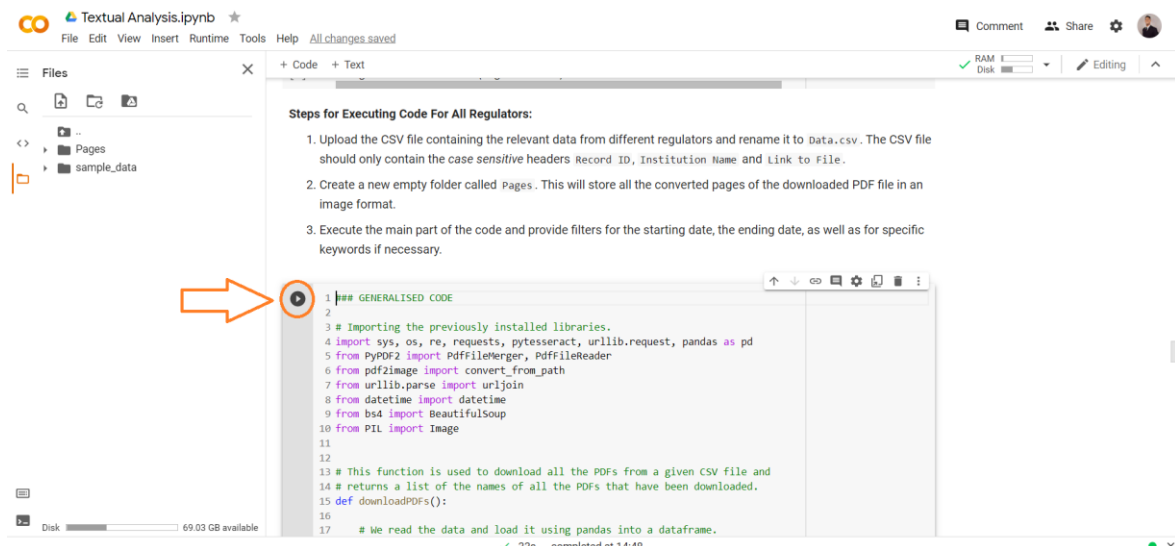

## Steps for Executing Textual Analysis Code:

1. Open the Google Colab Notebook using this [link](#).
2. You will be greeted with this page, and you can proceed by signing into your Google account.

3. Execute the code initialisation part of the program by pressing this play button as shown. Proceed to the next step if the execution is complete.

6. Once the program finishes executing successfully, the 'Output.csv' file can be downloaded by right-clicking on it.
